

An Introduction to Systemic Intelligence (SysQ)

Practical Skills for Navigating Tumultuous Circumstances

Making decisions in the midst of uncertainty?

In the midst of unfamiliar, shifting, turbulent, and frightening circumstances, how do you and your team make more rigorous sense of the new and unfamiliar system in which you must operate? How do you identify the most effective decision when you have a range of options? How do you get people on the same page about the nature of the challenges you're facing and how to best address them?

Increase your systemic intelligence (SysQ).

The Webinar

Using the coronavirus pandemic as an example, in this webinar you will learn...

- What is SysQ and how it moves far above and beyond commonly held notions of systems thinking.
- Why SysQ is an essential competency for building better strategies, improving decision-making, and managing change—especially in tough circumstances.
- How building your team's SysQ is a powerful way to generate more agile and effective teamwork.
- How SysQ supports and enhances the “conversational capacity” of your team and organization.
- How to use SysQ practices to elevate your thinking, and that of your team or organization, to a fundamentally different level when it matters the most.
- To identify what distinguishes a “high leverage” strategy from mediocre strategies, and more importantly, from those that fail or make things worse.
- A proven process and toolkit you and your team can use to significantly (and quickly) increase your collective SysQ.

Takeaway

You'll walk away with practical strategies that help you exercise more profound leadership, and help your team, organization, or community respond to difficult circumstances in a more collaborative and intelligent way.

Upcoming Webinar Series

For those wanting to learn more, the webinar concludes with an outline of an upcoming webinar series that will dive deeper into several of the skills and tools presented during the session.

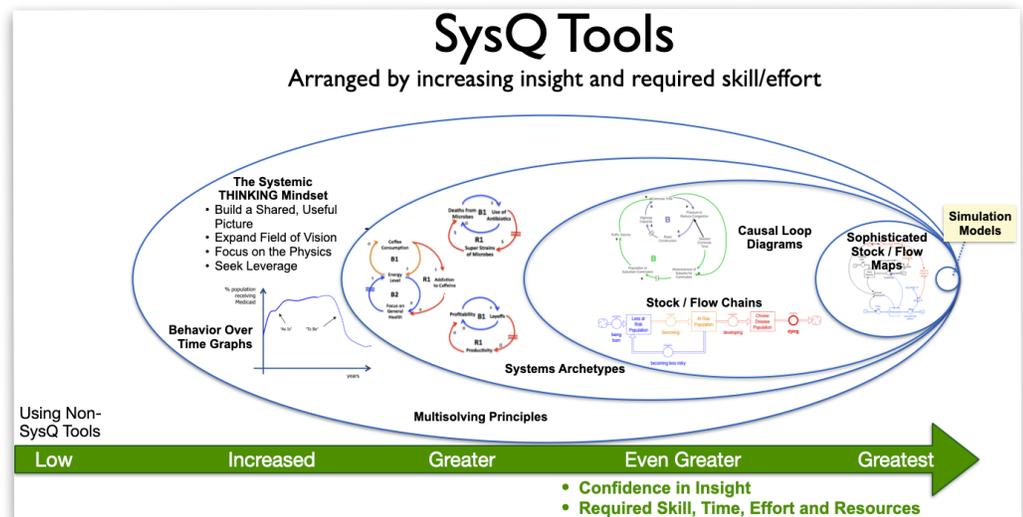

Instructor

Chris Soderquist has over twenty years' experience as a strategy and leadership consultant, coach and educator, with a diverse set of clients from the private and public sectors. A few of Chris's clients include: Boeing, The Centers for Disease Control and Prevention, Cincinnati Child Poverty Collaborative, Hewlett-Packard, Nissan, Northwestern Mutual, Robert Wood Johnson Foundation, State of Georgia, World Bank, and World Economic Forum.

SysQ

Systemic Intelligence

SysQ is the ability to identify *high leverage* solutions to challenges by shifting how you see and analyze challenges—so that you create *lasting improvement* without unintended consequences.
